

traf_calm_ftr	Ordnance Survey (MasterMap)
modalfil	CycleStreets
mf_cnt	CycleStreets

Presence of traffic calming measures such as bums, chokers, tables.

physical barriers (such as planters) or signage control measures to limit through-journeys along a street by certain modes; permissive mode value

count of modal filters per street segment

The **Modal Filters** were downloaded via the [CycleStreets](#) API. They are physical on-road barriers that filter motorized traffic such as planters or bollards. I am afraid I have no recommendation for Australia. The **Traffic Calming** structures which are usually road bumps are collected from Ordnance Survey. We got also the **Average Width** from the same data store. Do you have access to this service? It is proprietary, so I can't share the dataset, but if you do have access I can explain how we got it.
